IBsolution Migration Audit for SAP IdM

It is official: The end of maintenance for SAP Identity Management (IdM) has been announced for 2027. Extended maintenance is available for a fee until the end of 2030, but there will be no direct successor from SAP. It is high time to act because migrating to another tool requires some preparation.

It is clear that there will be no successor to SAP Identity Management (IdM). At the end of maintenance in 2027, SAP will end mainstream maintenance of the software solution and retire it for good. The strategic partnership with Microsoft in the area of identity management, which SAP officially announced at the DSAG Technology Days 2024, offers new opportunities, but also raises a number of new questions.

A situation that requires SAP IdM customers to carefully plan and prepare their future IAM landscape to ensure that their company can continue to operate smoothly after 2027 – without security risks and by taking into account all compliance requirements. In this context, the question also arises as to how long the old IdM system should continue to be used, how long parallel operation is necessary and what is the best economic time to switch to a new system. A change that also offers the opportunity to rethink the topic of Identity & Access Management in the company and to become aware of roles, tasks and significance in the company.

Together with you, we look at ways of ensuring end-to-end IdM operations, focus on tool-independent operational issues and the content-related task of identity management over the next 10 years. We look for alternative software solutions and create a detailed plan that describes the transition to an alternative identity management solution. We also go into detail about the **strategic Microsoft partnership with SAP for Microsoft Entra ID** and its significance for your IAM project.

You receive a decision template for management and the business department, including all relevant KPIs and costs. This also includes an elaborated roadmap for the migration of your Identity & Access Management including system and architecture recommendations as well as jointly identified optimization potentials.

Don't hesitate and work with us to develop your individual "Post SAP IdM - Identity & Access Management Strategy" because:

- The maintenance and operating costs for SAP IdM will increase.
- Outdated systems cause difficulties, especially when integrating new applications.
- New systems offer opportunities to increase efficiency and to gain productivity benefits.
- Migration to a new system offers the chance to rethink and optimize strategy, organization, processes and systems.

The IBsolution Migration Audit for SAP IdM includes :

Analysis of your current IdM system

- Functions and processes
- Strengths and weaknesses of the system
- State-of-the-art evaluation
- Definition of necessary optimizations
- Strategy and IAM organization
- Definition of the content to be transferred for the migration

Market analysis and tool selection

- Evaluation and analysis of the current market situation
- Recommendation and comparison of a suitable IAM tool
- Evaluation of possible technical migration
- Cost and deployment models
- Demo cases and hands-on sessions

Migration strategy

- Project description and roadmap
- Procedure and approach
- Schedule and milestones
- Division into logical segments for parallel operation
- Cost assessment

SAP IdM quick wins

- Identification and solution of current problems
- Cost-benefit assessment
- Timing of decommissioning and latest possible start of migration in terms of cost savings

The result is a strategic decision paper for the management, developed together with the business department.
