

Location: Remote

Your tasks:

- You advise our customers on transformation and digitization projects and design future-proof and innovative cloud solutions with them
- Your tasks range from analysis and planning to the conception and implementation of your creative ideas based on the professional and technical requirements and implementation of cloud-native Azure technologies, ideally in conjunction with the SAP Business Technology Platform
- Realization of flexible cloud architectures in agile teams, considering clean code and good software crafting, suitable refactoring measures and continuous improvement of the build and test infrastructure
- Development of best practices for testability, maintainability and scalability
- Advice and active technical support for technologies to be used

Your Profile:

- Personality: able to work in a team, responsible and initiative, high quality awareness, inquisitive
- Working method: structured, analytical and quick perception, solution-oriented, responsible
- Experience: at least two years of project experience in the cloud environment, specifically on Microsoft Azure
- Enthusiasm: finding technical solutions to tricky problems, fun with new topics (e.g. machine learning, digital twin, native web development)
- Expertise: Practical experience in at least one of the following areas: Microsoft Azure, Microsoft DevOps, .Net
- Languages: fluent in English and good knowledge in German is a plus
- Education: (technical) university degree, preferably in computer science/business informatics or from another scientific field
